DETAILED ACTION

Cancellation of claims 3, 17-23, 25, 28-29, and 31-35 is acknowledged.

Claim Objections

Claims 26-27 cannot be further examined because they are depended on the canceled claim 17.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2, 4-11, 16, 24, 30, 36-39, and 41 are rejected under 35 U.S.C. 102(b) as being anticipated by Falossi et al. (US 5,409,403).

Falossi et al. disclose (see Figures 7-8) :

a cylindrical receptacle (2) having a cavity (12), a first, second, and third contact detents (16, 20) extending into the cavity from an open end;

a cylindrical plug (52) having a corresponding first, second, and third contacts (66); a tip (54); and a stop (60).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 12-15 and 40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Falossi et al. (US 5,409,403).

Falossi et al. substantially disclosed the claimed invention except the receptacle having a fourth contact detent, and the plug having a corresponding fourth contact.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to duplicate the contact detents and the contact of the receptacle and the plug respectively, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.
